

▶ Share on-site data easily with clients and office personnel!

DMS Cloud offers the industry's most cost effective and easy to use solution to enhance your local data acquisition products into the cloud. Grant access to view data in any web browser, on any PC, tablet or smartphone. Just click the automatically generated, password protected link to open your data in any web browser. For full access, simply setup user accounts.

▶ Real-time data is at your fingertips!

If you need a simple way to share data with any client, engineer or supervisor, distribute the automatic generated link with One Job Password and grant access to just this set of data. If you want to ensure that data is just shared via full user credentials, deactivate One Job Passwords globally.

One Stop Shop

We supply the cloud services and manage the server so you don't have to!

Scale With You

Platform is designed to scale with your business needs

▶ Big data for small companies and beyond!

PACKAGE OPTIONS

	S	M	L
Max # of Simultaneous Live Users*	3	10	20
Number of Sending Devices	3	10	20
Saved Data Points**	1.0 Billion	3.3 Billion	6.6 Billion

* This doesn't restrict the amount of created user accounts, it just limits the amount of users that can be logged in at the same time.

** One Billion saved data points equals the maximum data amount of a single local DMS instance. Every single saved value equals one data point.

Example 1: 10 Values * 60 Seconds * 60 Minutes = 36,000 data points/hour = **27,700 hours** continuous logging with **S** package.

Example 2: 1000 Values * 60 Seconds * 60 Minutes = 3,600,000 data points/hour = **1,833 hours** continuous logging with **L** package.
